

Subhasish Goswami

Product Leader | Lending, Credit Decisioning and Applied AI

Bengaluru, India | subhasishgoswami02@gmail.com | linkedin.com/in/subhasishgoswami | Portfolio: subhasishgoswami02.github.io

SUMMARY

Product leader with 14 years in technology platforms, seven of them building MPOWER Financing's lending, payments and AI infrastructure from the ground up as employee #20 in India. Took credit decisioning from a 48-hour queue to under 10 seconds, scaled originations roughly 10x to about \$350M annual (about \$550M cumulative disbursed on the platform), and shipped a production AI assistant plus an agentic servicing architecture. Acting product head for International Student Lending and US Domestic Lending from April 2026; reports to the CTO and leads five Product Managers across 5 PODs.

48hr to under 10 seconds credit decisioning, 3x throughput | ~10x origination growth, 2021 to 2025 | 98% containment, AI assistant across 35,277 users | \$43M incremental funded volume from risk-based pricing

EXPERIENCE

MPOWER Financing

Senior Manager, Product | Bengaluru, India | Dec 2019 to Present

Reporting to the CTO | Five Product Managers across 5 PODs, about 50 people spanning product, engineering and QA | ~\$350M annual originations

Joined as employee #20 in India with no in-house engineering team and built the product and decisioning platform from the ground up. Promoted four times to Senior Manager, Product, and acting product head for International Student Lending and US Domestic Lending from April 2026.

PLATFORM, DECISIONING AND CREDIT RISK

- Rebuilt underwriting as a configurable rules platform inside Salesforce, the system of record for the loan lifecycle, taking automated credit decisions from a 48-hour manual queue to under 10 seconds and tripling throughput with no added review headcount. The same engine cut new-lending-product launch time from months to days.
- Productized risk-based pricing across five tiers with Data Science, lifting approved loan amounts 13 to 17% and approval conversion 10 points with no cohort degradation, contributing \$43M of incremental funded volume; shipped with rollback controls for applicants already in review.
- Automated underwriting document work (identity verification, admission-letter extraction with fuzzy matching for international name variants, geocoded address checks), reaching about 75% automated verification on the straight-through path.

PAYMENTS AND PARTNER PLATFORM

- Led a cross-border payments migration for Canadian loan repayments onto a new processor: borrower consent, bank-account maintenance, weekly payment-file transmission and automatic deactivation after three consecutive failed debits, built against Payments Canada Rule H1.
- Owned the configuration and admin APIs behind a multi-tenant, embeddable B2B partner platform so each new partner placement reused one product experience through self-serve configuration rather than a one-off integration build.

APPLIED AND AGENTIC AI

- Shipped a production AI borrower-support assistant end to end, reaching 98% containment across 35,277 users. Separately, raised audited answer accuracy from 73.8% to 85.9% by moving compliance-sensitive topics into curated flows after red-teaming caught the assistant inventing an executive name absent from source documents; made negative-scenario and compliance testing a standing release gate.
- Designed an agentic AI system for loan servicing: delinquency, contactability, next-best-action and promise-to-pay each run as their own agent with dedicated data, tools and compliance rules, coordinated by a supervisor that decides what escalates to a human.

GROWTH, NEW MARKETS AND LEADERSHIP

- Diagnosed application drop-off with GA4, PostHog and A/B testing, taking start-to-submit completion to 92%, and localized for South Asia, Chinese and Spanish markets to lift organic-traffic-to-application-start conversion from 8.6% to 19.4%.
- Launched a new graduate-lending product after a federal policy change left a multi-billion-dollar segment without options, reaching \$10M in approved applications within two months by reusing existing underwriting and servicing and cutting required documents from 35 to 9.
- Converted a capital-markets funding pause into a live, reversible credit policy in two weeks, tightening eligibility across both lending lines through configuration, and owned lender-facing reporting across a \$178M+ pipeline as the pause widened.
- Chaired org-wide quarterly planning across both lending lines and presented the consolidated roadmap to the CEO, CFO and CTO for sign-off.

EARLIER EXPERIENCE

TietoEVRY

Product Owner | Dec 2018 to Dec 2019

- Owned product requirements for B2B asset-management software for a global commercial-real-estate client; turned a manual email-approval workflow into a funded automation workstream and designed a conversational assistant for first-line query handling.

Cognizant Business Consulting

Consultant / Business Analyst | May 2015 to Nov 2018

- Led RFP/RFI responses, proofs of concept and capability-maturity assessments for insurance, banking and financial-services clients; won \$0.42M in new billing and four onshore engagements, and built the business-rules inventory governing policy and underwriting changes on a top-tier insurer platform.

Wipro Technologies

Associate Consultant | Nov 2011 to Apr 2014

- Delivered claims-processing and policy-administration platform work for a major US property and casualty insurer, and led requirements for a CRM upgrade at a major US media client across onshore and offshore teams.

SKILLS

Product: Product strategy, roadmap and prioritization, OKRs, P&L accountability, AI product management, PRDs, discovery, experimentation, go-to-market, hiring and mentoring PMs

Lending: LOS/LMS, credit decisioning, underwriting automation, risk-based pricing, credit-policy versioning, KYC, bureau and alternate-data integrations (TransUnion, Nova Credit, Plaid, Veriff), disbursement, servicing and collections

AI and ML: RAG, LLM evaluation and monitoring, red-teaming, grounding and guardrails, agentic / multi-agent design, AI governance and model risk

Platform and APIs: Multi-tenant B2B platform architecture, embeddable widgets, partner provisioning, configurable rules engines, workflow automation, architecture trade-offs

Analytics / Delivery: GA4, PostHog, Amplitude, SQL, Tableau, VWO, Jira, Salesforce, Zendesk, Figma; Claude Code, Cursor, Replit, n8n (Decision Studio, RAG eval harness, CareerOS)

EDUCATION AND CERTIFICATIONS

MBA (PGPM), Finance and Business Analytics, Great Lakes Institute of Management | Apr 2014 to Apr 2015

B.Tech, Electronics and Instrumentation Engineering, Haldia Institute of Technology | Apr 2007 to Apr 2011

Certifications: AI Product Leadership Certification, Product Faculty (Sep 2026); AI Product Management Certification, Product Faculty (Nov 2025); AINS 21 – Property and Liability Insurance Principles, The Institutes (Sep 2015)
